Package ‘UniprotR’

March 5, 2024

Title Retrieving Information of Proteins from Uniprot

Version 2.4.0

Author Mohamed Soudy [aut, cre],
Ali Mostafa [aut]

Maintainer Mohamed Soudy <`MohmedSoudy2009@gmail.com`>

Description Connect to Uniprot <`https://www.uniprot.org/`> to retrieve information about proteins using their accession number such information could be name or taxonomy information, For detailed information kindly read the publication <`https://www.sciencedirect.com/science/article/pii/S1874391919303859`>.

R topics documented:

`ConstructGenesTree` *Connect and parse UniProt information.*

Description

This Function is used to plot Genes Tree in the data of the accession/s.

Usage

```
ConstructGenesTree(ProteinDataObject,directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe returned from GetNamesTaxa function
`directorypath`	path to save txt file containig results returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`ConstructLocTree` *Connect and parse UniProt information.*

Description

This Function is used to plot location's Tree in the data of the accession/s in the chromosomes.

Usage

```
ConstructLocTree(ProteinDataObject,directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe returned from GetNamesTaxa function
`directorypath`	path to save txt file containig results returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`ConvertID` *Connect and parse UniProt database identifiers information.*

Description

The function is work to convert the UniProtKB AC/ID to any database identifiers available by the UniProtKB. For more information about available database identifiers see https://www.uniprot.org/help/id_mapping. see https://raw.githubusercontent.com/MohmedSoudy/UniprotR/master/uniprot_ids.csv

Usage

```
ConvertID(ProteinAccList,ID_from="UniProtKB_AC-ID",ID_to=NULL,taxId=NULL,path=NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`ID_from`	string of database identifier abbreviation, from which the Accession/ID will be converted
`ID_to`	string of database identifier abbreviation, to which the Accession/ID will be converted. default is all database identifier available in UniProtKB
`taxId`	string Needed when the ID_to is 'UniProtKB' that could be '9606' for human.
`path`	path to save excel file containig results returened by the function.

Value

DataFrame where column one contains the Accession/ID before conversion and other columns contains the Accession/ID after conversion

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Enrichment.BP` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of biological process of given list of genes or proteins

Usage

```
Enrichment.BP(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism name Example: human - ’hsapiens’, mouse - ’mmusculus’
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Enrichment.CC` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of cellular component of given list of genes or proteins

Usage

```
Enrichment.CC(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism name Example: human - ’hsapiens’, mouse - ’mmusculus’
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Enrichment.KEGG` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of given list of genes or proteins from KEGG database

Usage

```
Enrichment.KEGG(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism name Example: human - 'hsapiens', mouse - 'mmusculus'
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Enrichment.MF` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of Molecular function of given list of genes or proteins

Usage

```
Enrichment.MF(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism name Example: human - 'hsapiens', mouse - 'mmusculus'
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Enrichment.REAC` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of given list of genes or proteins from REACTOME

Usage

```
Enrichment.REAC(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism name Example: human - 'hsapiens', mouse - 'mmusculus'
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Get.diseases` *Connect and parse UniProt information.*

Description

This Function is used to get diseases associated with proteins.

Usage

```
Get.diseases(Pathology_object , directorypath = NULL)
```

Arguments

`Pathology_object`	Dataframe retrieved from UniprotR Function "GetPathology_Biotech"
`directorypath`	path to save Output file

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetAccessionList` *Connect and parse UniProt information.*

Description

This function can be used to get a list of UniProt Accession/s from a csv file.

Usage

```
GetAccessionList(DataObjPath)
```

Arguments

`DataObjPath`	input path of excel file

Value

a vector of UniProt Accession/s

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetExpression` *Connect and parse UniProt Expression information.*

Description

The function is work to retrieve Expression data from UniProt for a list of proteins accessions.For more information about what included in the Expression data see https://www.uniprot.org/help/return_fields.

Usage

```
GetExpression(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetFamily_Domains` *Connect and parse UniProt Family Domains information.*

Description

The function is work to retrieve Family Domains data from UniProt for a list of proteins accessions.For more information about what included in the Family Domains data see https://www.uniprot.org/help/return_fields.

Usage

```
GetFamily_Domains(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetGeneral_Information` *Connect and parse UniProt General Information.*

Description

The function is work to retrieve General Information data from UniProt for a list of proteins accessions.For more information about what included in the General Information data see https://www.uniprot.org/help/return_fielc

Usage

```
GetGeneral_Information(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the General Information of protein from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetGeneral_Information("O14520")
```

`GetMiscellaneous` *Connect and parse UniProt Miscellaneous information.*

Description

The function is work to retrieve Miscellaneous data from UniProt for a list of proteins accessions.For more information about what included in the Miscellaneous data see https://www.uniprot.org/help/return_fields.

Usage

```
GetMiscellaneous(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy `<Mohamed.soudy@57357.com>` and Ali Mostafa `<ali.mo.anwar@std.agr.cu.edu.eg>`

Examples

```
Obj <- GetMiscellaneous("O14520")
```

`GetNamesTaxa` *Connect and parse UniProt Names Taxa information.*

Description

The function is work to retrieve Names Taxa data from UniProt for a list of proteins accessions. For more information about what included in the NamesTaxa data see https://www.uniprot.org/help/return_fields.

Usage

```
GetNamesTaxa(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results retourened by the function.

Value

DataFrame where rows names are the accession and columns contains the information of protein name & taxonomy from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetNamesTaxa("O14520")
```

`GetPathology_Biotech` *Connect and parse UniProt Pathology_Biotech information.*

Description

The function is work to retrieve Pathology_Biotech data from UniProt for a list of proteins accessions.For more information about what included in the Pathology_Biotech data see https://www.uniprot.org/help/return_fields

Usage

```
GetPathology_Biotech(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results retourened by the function.

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetPathology_Biotech("O14520")
```

`GetpdbStructure` *Connect and parse UniProt information.*

Description

The function is work to retrieving GetpdbStructure and download it to user directory.

Usage

```
GetpdbStructure(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	input a vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetProteinAnnontate` *Connect and parse UniProt information.*

Description

The function is work to retrieve user-defined information data from UniProt for a list of proteins accessions For more information see https://www.uniprot.org/help/uniprotkb_column_names

Usage

```
GetProteinAnnontate(ProteinAccList , columns)
```

Arguments

`ProteinAccList`	a vector of UniProt Accession/s
`columns`	a vector of UniProtKB column names

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetProteinInteractions("O14520")
```

`GetProteinFunction` *Connect and parse UniProt Protein Function information.*

Description

The function is work to retrieve Protein Function data from UniProt for a list of proteins accessions.For more information about what included in the Protein Function data see https://www.uniprot.org/help/return_fields.

Usage

```
GetProteinFunction(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information of protein function roles from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetProteinFunction("O14520")
```

`GetProteinGOInfo` *Connect and parse UniProt proteins gene ontology information.*

Description

The function is work to retrieve proteins gene ontology data from UniProt for a list of proteins accessions.For more information about what included in the proteins gene ontology data see https://www.uniprot.org/help/return_fi

Usage

```
GetProteinGOInfo(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information of Gene ontology of protein from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetProteinGOInfo("O14520")
```

`GetProteinInteractions` *Connect and parse UniProt protein Interactions information.*

Description

The function is work to retrieve protein Interactions data from UniProt for a list of proteins accessions.For more information about what included in the protein Interactions data see https://www.uniprot.org/help/return_fields

Usage

```
GetProteinInteractions(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information of protein Interactions from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetProteinInteractions("ProteinAccession")
```

`GetproteinNetwork` *Connect and parse stringdb information.*

Description

This function is connecting to stringdb and retrieve all possible interactions for the searched protein/s.

Usage

```
GetproteinNetwork(ProteinAccList , directorypath = NULL)

GetproteinNetwork(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	input a vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetproteinNetwork_all` *Connect and parse stringdb information.*

Description

This function is connecting to stringdb and retrieve PPI between input list

Usage

```
GetproteinNetwork_all(ProteinAccList , directorypath = NULL, SpeciesID = 9606)

GetproteinNetwork_all(ProteinAccList , directorypath = NULL,SpeciesID = 9606)
```

Arguments

`ProteinAccList`	input a vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.
`SpeciesID`	Taxonomic id of accession's species ex. homo sapines 9606

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetProteomeFasta` *Connect and DOWNLOAD Proteome info.*

Description

The function is work to retrieve proteome information in FASTA format based on proteome id.

Usage

```
GetProteomeFasta(ProteomeID , directorypath = NULL)
```

Arguments

`ProteomeID`	Proteome ID from UniProt
`directorypath`	path to save FASTA file containig results returened by the function.

Note

The function Download fasta format of proteome.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetProteomeInfo` *Connect and DOWNLOAD Proteome info.*

Description

The function is work to retrieve proteome information based on proteome id.

Usage

```
GetProteomeInfo(ProteomeID , directorypath = NULL)
```

Arguments

`ProteomeID`	Proteome ID from UniProt
`directorypath`	path to save CSV file containig results returened by the function.

Note

The function Download csv Info of proteome.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetPTM_Processing` *Connect and parse UniProt PTM_Processsing information.*

Description

The function is work to retrieve PTM_Processsing data from UniProt for a list of proteins accessions. For more information about what included in the PTM_Processsing data see https://www.uniprot.org/help/return_fields

Usage

```
GetPTM_Processing(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetPTM_Processing("O14520" )
```

`GetPublication` *Connect and parse UniProt Publication about a protein information.*

Description

The function is work to retrieve Publication data from UniProt for a list of proteins accessions. For more information about what included in the Publication data see https://www.uniprot.org/help/return_fields.

Usage

```
GetPublication(ProteinAccList , directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the Publication of protein from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GETSeqFastaUniprot` *Connect and parse UniProt information.*

Description

This Function is used to get Sequence information of accession/s from Uniprot as a Fasta file.

Usage

```
GETSeqFastaUniprot(Accessions,FilePath = NULL, FileName = NULL)
```

Arguments

`Accessions`	Vector of UniProt Accession/s
`FilePath`	path of directory to save the output fasta.
`FileName`	Name of the fasta file.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`GetSeqLength` *Connect and parse UniProt Sequences information.*

Description

The function is work to retrieve Sequence's Length data from Uniparc for a list of proteins accessions. This function was added to overcome the NAs returned when Uniprot database deleted the protein from the database

Usage

```
GetSeqLength(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetSeqLength("O14520")
```

`GetSequenceIso` *Connect and parse UniProt Sequences information.*

Description

The function is work to retrieve protein's Sequence data from Uniparc for a list of proteins accessions. This function was added to handle isoformes

Usage

```
GetSequenceIso(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
Obj <- GetSequenceIso("O14520")
```

`GetSequences` *Connect and parse UniProt Sequences information.*

Description

The function is work to retrieve Sequences data from UniProt for a list of proteins accessions. For more information about what included in the Sequences data see https://www.uniprot.org/help/return_fields.

Usage

```
GetSequences(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s
`directorypath`	path to save excel file containig results returened by the function

Value

DataFrame where rows names are the accession and columns contains the information retrieved from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy `<Mohamed.soudy@57357.com>` and Ali Mostafa `<ali.mo.anwar@std.agr.cu.edu.eg>`

Examples

```
Obj <- GetSequences("O14520")
```

`GetStructureInfo` *Connect and parse UniProt protein Structure information.*

Description

The function is work to retrieve Structral data from UniProt for a list of proteins accessions. For more information about what included in the structral data see https://www.uniprot.org/help/return_fields.

Usage

```
GetStructureInfo(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s.
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the Structural information of protein from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

`GetSubcellular_location` *Connect and parse UniProt protein Subcellular location information.*

Description

The function is work to retrieve protein Subcellular location data from UniProt for a list of proteins accessions. For more information about what included in the protein Subcellular location data see https://www.uniprot.org/help/return_fields.

Usage

```
GetSubcellular_location(ProteinAccList, directorypath = NULL)
```

Arguments

`ProteinAccList`	Vector of UniProt Accession/s.
`directorypath`	path to save excel file containig results returened by the function.

Value

DataFrame where rows names are the accession and columns contains the information about Subcellular location of protein from the UniProt

Note

The function also, Creates a csv file with the retrieved information.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Goparse` *Connect and parse UniProt information.*

Description

This Function is used to parse data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
Goparse(GOObj , index = 3)
```

Arguments

`GOObj`	Dataframe.
`index`	idex of Go term in GoObj

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`HandleBadRequests` *Handle bad requests This Function is used to handle possible errors when trying to get url response.*

Description

Handle bad requests This Function is used to handle possible errors when trying to get url response.

Usage

```
HandleBadRequests(RequestCode)
```

Arguments

`RequestCode`	Response returned from url

Value

None

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

Examples

```
HandleBadRequests(400)
```

`Pathway.Enr` *Connect and parse UniProt information*

Description

This function is used for Enrichment analysis of given list of genes or proteins

Usage

```
Pathway.Enr(Accs,OS="hsapiens",p_value=0.05,directorypath=NULL,top=10)
```

Arguments

`Accs`	Vector of UniProt Accession/s or genes
`OS`	organism Example: human - 'hsapiens' for more info https://biit.cs.ut.ee/gprofiler/page/organism-list
`p_value`	custom p-value threshold for significance, default = 0.05
`directorypath`	Path to save output plot
`top`	Top N terms to be visualized

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Plot.GOMolecular` *Connect and parse UniProt information.*

Description

This Function is used to plot Molecular function of proteins.

Usage

```
Plot.GOMolecular(GOObj, Top = 10, directorypath = NULL)
```

Arguments

`GOObj`	Dataframe returned from UniprotR Function "GetProteinGOInfo"
`Top`	Number of molecular functions to be visualized
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`Plot.GOSubCellular` *Connect and parse UniProt information.*

Description

This Function is used to plot subcellular localization of proteins.

Usage

```
Plot.GOSubCellular(GOObj, Top = 10, directorypath = NULL)
```

Arguments

`GOObj`	Dataframe returned from UniprotR Function "GetProteinGOInfo"
`Top`	Number of molecular functions to be visualized
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotAcidity` *Connect and parse UniProt information.*

Description

This Function is used to plot proteins acidity retrieved from "GetSequences" Function.

Usage

```
PlotAcidity(SeqDataObjPath , directorypath = NULL)
```

Arguments

`SeqDataObjPath`	Dataframe retrieved from UniprotR Function "GetSequences"
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotCharge` *Connect and parse UniProt information.*

Description

This Function is used to plot proteins charge retrieved from "GetSequences" Function.

Usage

```
PlotCharge(SeqDataObjPath , directorypath = NULL)
```

Arguments

`SeqDataObjPath`	Dataframe retrieved from UniprotR Function "GetSequences"
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotChromosomeInfo` *Connect and parse UniProt information.*

Description

This Function is used to plot location's frequency in the data of the accession/s in the chromosomes.

Usage

```
PlotChromosomeInfo(ProteinDataObject,directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe returned from GetNamesTaxa function
`directorypath`	path to save files retuened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGenesNetwork` *Connect and parse UniProt information.*

Description

This Function is used to cluster proteins based on primary genes retrieved from "GetNamesTaxa" Function.

Usage

```
PlotGenesNetwork(ProteinDataObject , directorypath = NULL)
```

Arguments

`ProteinDataObject`	Dataframe retrieved from UniprotR Function "GetNamesTaxa"
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGOAll` *Connect and parse UniProt information.*

Description

This Function is used to plot the retrieved Gene Ontology from function ’GetProteinGOInfo’.

Usage

```
PlotGOAll(GOObj, Top = 10, directorypath = NULL, width = width, height = height)
```

Arguments

`GOObj`	Dataframe returned from UniprotR Function "GetProteinGOInfo"
`Top`	Number of molecular functions to be visualized
`directorypath`	path to save Output plot.
`width`	width of the generated plot
`height`	height of the generated plot

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGOBiological` *Connect and parse UniProt information.*

Description

This Function is used to plot Biological process of proteins.

Usage

```
PlotGOBiological(GOObj, Top = 10, directorypath = NULL)
```

Arguments

`GOObj`	Dataframe returned from UniprotR Function "GetProteinGOInfo"
`Top`	Number of molecular functions to be visualized
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGoInfo` *Connect and parse UniProt information.*

Description

This Function is used to plot data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
PlotGoInfo(GOObj , directorypath = NULL)
```

Arguments

`GOObj`	Dataframe retrieved from UniprotR Function "GetProteinGOInfo".
`directorypath`	path to save excel file containig results returened by the function (default = NA).

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGoterms` *Connect and parse UniProt information.*

Description

This Function is used to plot data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
PlotGoterms(GOObj , directorypath = NULL)
```

Arguments

`GOObj`	Dataframe.
`directorypath`	path to save plot returned by function (default = NA).

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotGravy` *Connect and parse UniProt information.*

Description

This Function is used to plot proteins gravy index retrieved from "GetSequences" Function.

Usage

```
PlotGravy(SeqDataObjPath , directorypath = NULL)
```

Arguments

`SeqDataObjPath`	Dataframe retrieved from UniprotR Function "GetSequences"
`directorypath`	path to save Output plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotPhysicochemical` *Connect and parse UniProt information.*

Description

This function can be used to get a list of UniProt Accession/s from a csv file.

Usage

```
PlotPhysicochemical(SeqDataObjPath , directorypath = NULL)
```

Arguments

`SeqDataObjPath`	Dataframe returned from GetSequence function.
`directorypath`	Path to save Physcochemical properties plot.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotproteinExist` *Connect and parse UniProt information.*

Description

This Function is used to plot protein status in the data of the accession/s.

Usage

```
PlotproteinExist(ProteinDataObject,directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe returned from GetMiscellaneous function
`directorypath`	path to save files returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotProteinGO_bio` *Connect and parse UniProt information.*

Description

This Function is used to plot biological process data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
PlotProteinGO_bio(GO_df , dir_path = NA)
```

Arguments

`GO_df`	Dataframe.
`dir_path`	path to save files retruened by the function (default = NA).

Note

if no dir_path was given (default = NA) the function will only view the plot and will not save it

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotProteinGO_cel` *Connect and parse UniProt information.*

Description

This Function is used to plot cellular components data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
PlotProteinGO_cel(GO_df , dir_path = NA)
```

Arguments

`GO_df`	Dataframe.
`dir_path`	path to save files returened by the function (default = NA).

Note

if no dir_path was given (default = NA) the function will only view the plot and Will not save it

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotProteinGO_molc` *Connect and parse UniProt information.*

Description

This Function is used to plot molecular functions data retrieved from UniprotR Function "GetProteinGOInfo".

Usage

```
PlotProteinGO_molc(GO_df , dir_path = NA)
```

Arguments

`GO_df`	Dataframe.
`dir_path`	path to save files returened by the function (default = NA).

Note

if no dir_path was given (default = NA) the function will only view the plot and will not save it

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotproteinStatus` *Connect and parse UniProt information.*

Description

This Function is used to plot protein status in the data of the accession/s.

Usage

```
PlotproteinStatus (ProteinDataObject,directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe returned from GetMiscellaneous function
`directorypath`	path to save files returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`PlotProteinTaxa` *Connect and parse UniProt information.*

Description

This Function is used to plot different taxas found of the accessions.

Usage

```
PlotProteinTaxa(ProteinDataObject , directorypath = NULL)
```

Arguments

`ProteinDataObject`	input a Dataframe of proteins as rownames.
`directorypath`	path to save files returened by the function.

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>

`ProcessAcc` *Connect and parse UniProt information.*

Description

This Function is used to check validty of input accessions the data of the accession/s.

Usage

```
ProcessAcc(Accessions)
```

Arguments

`Accessions`	acession list returened from GetAccession function

Author(s)

Mohmed Soudy <`Mohamed.soudy@57357.com`> and Ali Mostafa <`ali.mo.anwar@std.agr.cu.edu.eg`>
