1 Introduction

This file implements adaptions to the `mathtools` package needed for the tagging project.

2 The Implementation

```
1 <@@=math>
2 <*kernel>
```

2.1 File declaration

```
3 \ProvidesFile{latex-lab-mathtools.ltx}
4 [2024-07-13 v0.1a mathtools adaptions]
```

2.2 Tagpdf support

To make the code independent from tagging being loaded and active we load the `tagpdf-base` package:

```
5 \RequirePackage{tagpdf-base}
```

*

2.3 \shortintertext

Similar to the `\intertext` command from `amsmath`, `\shortintertext` errors with active tagging as it is processed twice which leads to duplicated structures. The fix is similar but is complicated as `mathtools` defines two version (and an additional `\intertext` version) and package options to switch between the variants.

At first we redefine all the internal commands

```

Stop tagging when measuring:

```

```

End the previous mc:

```

46   \tag_mc_end_push:

```

We are already in a par so we change now to Span:

```

47   \tagpdfsetup{para/tag=Span}

```
